

1.

radius

2.

The same name as the class name

3.

Public access modifiers can be used anywhere in the program while private modifiers can only be used in their class.

4.

Invalid because radius is private and encapsulated. So it cant be accessed outside its class.

5.

- a) Roo
- b) private int x;
- c) public int getX()
- d) public void setX(int z)
- e) private int calculate()
- f) Roo
- g) 4

6.

A class describes what data an object has and its behavior. An object is created from a class and stores the data and can perform actions and provide communication.

9.

- a) private static final z;
- b) private double y; private static int x;
- c) private double y;
- d) private static int x; private static final z;

11.

Overriding methods redefine a method from a superclass in a subclass. Overloading methods allows a class to have multiple methods with the same name just different parameters.
